

Backend Engineering Internship at Mycroft (paid)

We're looking for a curious and skilled Backend Engineering Intern to join our team. You'll work on building and enhancing features through RESTful APIs, while gaining hands-on experience with cloud infrastructure and databases.

What You'll Do

- Develop and maintain backend services using Python
- Work with cloud infrastructure and database systems
- Create and enhance RESTful APIs
- Collaborate with team members to implement new features
- Learn and apply DevOps practices

What You'll Need

- Strong Python programming skills
- Experience with SQL and database concepts
- Interest in DevOps and cloud infrastructure
- Eagerness to understand business context
- Willingness to learn TypeScript/Node.js as needed

How to Apply

1. Choose a project you've contributed to (could be open source, academic, or personal)
2. Write one page about the project, focusing on:
 - Project overview
 - Your specific contributions
 - Technical challenges faced and overcome
 - Impact of your work
3. Email to prasanna@mycroft.in with:
 - Subject line: "Backend Engineering Internship Application"
 - Your one-page write-up
 - Link to relevant code repository or pull request

Join us in building scalable, efficient backend solutions at Mycroft!
