

Machine Learning Internship at Mycroft (paid)

We're looking for a Machine Learning Intern with strong analytical skills to work on end-to-end ML solutions. You'll tackle real business challenges while implementing practical machine learning solutions from conception to deployment.

What You'll Do

- Analyze business problems and conceive ML solutions
- Develop end-to-end ML implementations
- Work with data extraction and preparation
- Train and optimize ML models
- Deploy models in production environments

What You'll Need

- Strong foundation in statistics and classical ML techniques
- Experience with Python and R for data analysis
- Familiarity with SQL for data manipulation
- Understanding of fundamental ML algorithms (boosted trees, linear regression, etc.)
- Interest in MLOps and deployment practices
- Tidymodels experience is a plus

How to Apply

1. Choose a project you've contributed to (could be open source, academic, or personal)
2. Write one page about the project, focusing on:
 - Project overview
 - Your specific contributions
 - Technical challenges faced and overcome
 - Impact of your work
3. Email to prasanna@mycroft.in with:
 - Subject line: "Machine Learning Internship Application"
 - Your one-page write-up
 - Link to relevant code repository or pull request

Join us in building intelligent solutions at Mycroft!
